## **IN THE ABSTRACT:**

Replace the abstract originally provided on the cover sheet of the PCT application with the new abstract as follows. A new abstract numbered page 25 is enclosed for the last page of the application following the claims.

## ABSTRACT OF THE DISCLOSURE

A telecommunication optical fiber cable and in particular a reduced diameter optical cable with improved installation features for use in the end part of an access telecommunication network. The optical fiber cable has a number of optical fibers; at least a core tube containing the optical fibers; a jacket surrounding the core tube; and at least one strength rod spaced from the central axis, the cable having a twisting stiffness  $G \cdot J_p$ , wherein G is the elastic shear modulus; and  $J_p$  is the polar moment of inertia of a cable section, wherein the twisting stiffness  $G \cdot J_p$  is lower than or equal to 0.10 Nm<sup>2</sup>, preferably lower than or equal to 0.05 Nm<sup>2</sup>, and more preferably lower than or equal to 0.02 Nm<sup>2</sup>. The cable is profitably installable by a blown method.
